

June 24, 2021

Honorable Jennifer Granholm
Secretary
U.S. Department of Energy
1000 Independence Avenue SW
Washington, DC 20585

**Re: Consumer Support for Backstop Requirement for General Service Lamps —
In Relation to DOE Request for Information: EERE- 20X21-BT-STD-0005**

Dear Secretary Granholm:

Consumer Federation of America (CFA), the National Consumer Law Center (NCLC) and the 24 consumer groups listed below are writing in response to the Department's Request for Information regarding the backstop requirement for general service lamps issued on May 25, 2021, (Fed. Reg.: Vol. 86, No.99, 28001-5). We wish to highlight consumer support for more efficient lighting standards.

The implementation of the 45 lumens/watt minimum backstop standard for household lighting products¹, including all the shapes and sizes added by the Obama Administration, needs to go into effect as soon as is practicable. The delay in implementing the standard on January 1, 2020, as required by law, has already cost consumers well over a billion dollars in lost savings and caused the release of millions of tons of climate change emissions into the air. Each month of additional delay will cost consumers \$300 million in higher electricity bills and result in 800,000 tons of additional carbon emissions being spewed into the atmosphere. Already since the beginning of the new administration, consumers will spend \$1.8 billion on inefficient lighting costs, and 4.8 million tons of carbon will be released into the air we breathe needlessly.

Consumers are already benefiting from more efficient LEDs, but even greater savings are achievable with the backstop requirement. Changing just one bulb from an incandescent bulb to an LED saves \$40 – \$90 over ten years. Using the midpoint of this estimate (\$65) and the average number of bulbs per US home (about 45) translates into \$3,000 in net savings over 10 years.² While LEDs have become very popular, gaining an overall market share of about 60% according to market research firm Apex Analytics, the 40% of sales that are still incandescent products are costing consumers dearly.³

Prompt implementation of the standard will ensure that all consumers benefit from up-to-date, energy-saving technology. Low-income consumers, in particular, will see even greater benefits as they have energy bills that on average are disproportionately higher and a majority

¹ As required by the Energy Independence and Security Act, Pub. L. 110-140, §321(a)(6)(A)(v).

of them are renters. Tenants, when moving into housing, can often find pre-installed lightbulbs to be older, inefficient incandescents or CFLs. Research in Michigan found that low-income consumers have less access to affordable replacement LEDs than other consumers because the stores they often shop at do not stock them or set prices high. Research in New York also showed that urban stores stock fewer LEDs than suburban stores. Standards will ensure that all consumers have access to low-cost, energy-efficient LEDs whether they buy their bulbs at big box suburban stores, grocery stores, hardware stores, dollar stores or corner stores.

And, in addition to the direct savings on consumer electricity bills, there are also broader economic benefits from implementing the backstop standard. When the commercial and industrial sectors save on lighting costs, these energy savings can be passed on to consumers in the form of lower costs for goods and services, and can be spent in other areas in our economy with greater multiplier effects.

There is also widespread public support for the light bulb standards. A 2019 CFA survey found two-thirds of respondents support federal efficiency standards for light bulbs, compared to fewer than one-third who oppose standards.⁴ Not surprisingly, consumers who have had experience with LEDs are much likelier to support efficiency standards compared to those who have no experience.

LEDs are no longer a new, expensive lighting technology. Consumers who have made the switch to them enjoy not only the energy savings, but also the convenience of not having to replace them as often due to the long-life span of LEDs.

In closing, we urge the Department to promptly put into effect the legally required “backstop” standard for light bulbs, which the previous administration failed to do. Consumers, particularly low-income consumers, should no longer be subject to higher electric bills because out-of-date, less efficient technologies continue to be made available in the marketplace.

Thank you for your consideration of our views.

⁴ The survey was conducted for CFA by Engine International by cell phone and landline on March 21-24, 2019, using a representative sample of 1007 adult Americans. The survey’s margin of error is plus or minus 3.09 percentage points at the 95% confidence level.
